# AquaTrack Software

## Water Pipestand and Transaction Software

AquaTrack software leads the market with a suite of flexible, account based, pipestand transaction solutions to fit every utility need.
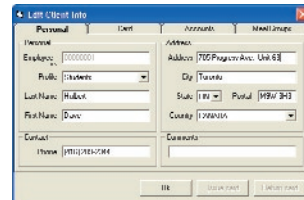

## Functionality

WaterProducts AquaTrack is the water industry's premier real time, on-line debit/credit and water utility software solution. Successfully deployed at many of North America's leading utilities and municipalities, AquaTrack was developed specifically to meet the unique needs of water utilities. By providing seamless access to account based funds and facilitating purchases at loading stations, AquaTrack increases efficiency and accountability of bulk water dispensing operations.

Integrating each loading station via a LAN, AquaTrack allows multiple account options for each database record/individual profile i.e. pre-paid accounts or bill after the fact accounts, providing the flexibility needed to meet your institution's specific requirements.

### AquaTrack can help you meet your needs with flexible and configurable pipestand solutions

Assign each participant to a profile group (prepaid or billed) and an account number linked to their ID card or other machine readable media.

### AquaTrack's architecture scales to accommodate a single site pipestand or large multi-site network of water loading stations

Configure your registers by account, by profile or location with privledges.

Transaction Processing Station — Single Water Station — Multiple Water Stations — Client Management Station — Database Server

Configure one or more pipestand locations. SQL-based software runs stand alone or across a network, allowing for multi-site installations that leverage your existing TCP/IP infrastructure.
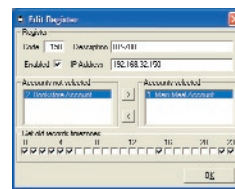

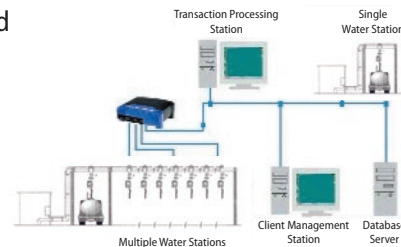

## Features and Benefits

- Design programs that meet your institution's specific needs, charging per unit or per gallon.
- Scaleable to accommodate a single site watering point or a multi-site network of water stations
- Expands to include unattended teller machines
- Leverage your investment and maintain a "one-card" environment using existing cards/badges with encoded magnetic stripe or RFID account cards
- Prevent data or transaction loss in the event of a communication or line outage through automatic back-up at the pipestand terminal
- Protect your customer's value by easily suspending and replacing lost or stolen cards
- Create valuable management and planning reports with AquaTrack
